With more Android phones searched daily in preparation for the holiday shopping season, here are seven new features in Ice Cream Sandwich that you should be aware of. Ice Cream Sandwich increases control over what can run on your phone, including bloatware that headphone manufacturers like to preload on devices. The new setting allows you to disable applications, remove icons, prevent the system from working, and provide options for later reset. The last time I tried to make a screenshot using my Droid 2 while still running Froyo, I was faced with a daunting process that involved winding that phone and using an Android SDK just to simply grab the screen. Google has finally simplified the process, and screen capture is now as simple as holding a few buttons. One of those features that seems like a no-brainer, Android 4.0 locates and underlines errors and suggests fixes like we've been doing at Microsoft Office for years. There is also support for third-party dictionaries, spellchecking and other text services. You may never use these features, but it's still impressive that ice cream sandwich is designed to be usable even by people who are blind or visually impaired. Touch Explore mode lets you navigate without looking at the screen with audible feedback. Updating your browser also now supports reading web content aloud. Visual voicemail support is now native to Android. You'll probably still have to pay your carrier to access this additional feature, but integrating voice transcriptions, audio files and more from multiple providers directly into the phone app is a big step forward. Much has been said about the new photo and editing options at Ice Cream Sandwich, but there are also some neat things to do with the video. Live Effects Collection graphical plugins that turn your phone into a video editing bay. Many effects are mostly silly, but Another cool bonus - effects can be used during live video chat in Google Talk.Android 4.0 can connect to devices that use a Bluetooth profile of a health device. In other words, with the help of a third-party app, Ice Cream Sandwich can connect to wireless medical devices and sensors. This means your Android phone can track your vital signs at the gym or elsewhere.
